Vending Operator

Vending Machine

- 1 Customer selects product and presents their card for payment (swipe / tap or chip insert)
- **2** Transaction is sent to the Vend Access gateway for processing
- VA encrypts the transaction data and submits to the acquiring bank for real time authorisation
 - Response is sent to machine and if approved, product is dispensed

Real time transaction and settlement reporting available via the CAS Gateway merchant portal in addition to detailed telemetry, stock information, etc from the vending management system.

6 Funds deposited staright into your bank account
